Experience

Software Engineer

Munich, Germany June

neXDos

2025 – Present

- Delivered **React/Next.js** SSR application for neXDos financial insights platform, achieving **50%** reduction in page load times through **code-splitting** and **CDN caching**, directly improving user engagement metrics
- Managed server state using **React Query** for API caching, background refetching, and optimistic updates, improving data synchronization and reducing redundant network calls
- Created **microservices**-based features for inter-service communication in a financial platform, leveraging **RabbitMQ** to handle async non-critical tasks and reduce heavy workloads
- Engineered reusable custom **React (TypeScript)** hooks for preference persistence, cross-app usage tracking, and handling responsiveness, improving modularity and front-end scalability
- Minimized redundant **Django (Python)** ORM calls and leveraged raw SQL queries and database views to optimize performance, reducing query response times by over **40%** in high-load endpoints
- Structured **Django (Python)** backend using strict **OOP** principles with DAO/DTO patterns, improving separation of concerns, testability, and long-term maintainability
- Defined caching using **Redis** to store frequently accessed query results, reducing database load and improving API response times by up to **60%**
- Implemented a **monorepo** architecture for multiple neXDos projects and built a shared component package, establishing a single source of truth and reducing code duplication by **50%**
- Optimized **React** rendering pipeline through virtualization, memo patterns, Suspense, and improving **Core Web Vitals** scores
- Maintained unit testing standards with **Jest/RTL**, having max code coverage and pre-deployment checks in place through snapshot testing
- Improved observability through **CloudWatch** metrics and **Sentry** error tracking, reducing incident response time by **40%**
- Developed a **RAG** pipeline with **FastAPI** across **340+** stock tables, utilizing multihop relational flows and guardrails to deliver secure, reliable SQL generation through **LLMs** for financial data exploration

Software Engineer

Karachi, Pakistan

Aideniti

(Remote) Dec 2023 – Dec

2024

- Added client-side state management with **Zustand** for complex multi-step workflows, replacing **Redux** to reduce boilerplate
- Designed a reusable **WebSocket** architecture using custom **React** hooks and event-driven patterns, delivering reliable real-time communication and cleaner state management across the application
- Architected a **microservices** platform, isolating issue tracking, authentication, payments, notifications, and real-time messaging into independently deployable services—enhancing scalability and accelerating feature delivery
- Integrated **Elasticsearch** to enable near real-time search across boards, tasks, and messages, reducing query latency from **2–4s** in PostgreSQL to **20–50ms** and dramatically improving user experience
- Led a team of **3 engineers** to build **Boarddd**, a scalable team collaboration platform for a **UK**-based client using **Agile** and **Lean** practices
- Designed **RESTful** and **GraphQL** microservices architecture on **AWS** (Lambda, **ECS**, API Gateway, RDS, **IAM**), implementing circuit breakers and retry patterns for higher uptime
- Composed a resilient API layer with **Axios** interceptors, handling token lifecycle, global error management, retries, and header standardization to improve reliability and maintainability
- Implemented end-to-end **CI/CD** pipelines with **GitHub Actions**, automating testing, **Docker** image builds, and multi-environment deployments to ensure fast, reliable, and zero-downtime releases

Software Engineer

Brew Buddy Information Technology

Dubai, UAE (Remote)

Dec 2022 – Dec 2023

- Designed dynamic master audit templates in **React**, enabling organizations to define reusable base templates and seamlessly customize them to fit diverse audit workflows
- Constructed **React forms** for efficient data entry and validation, ensuring accurate inputs. Created interactive dashboards using **Chart.js** to visualize audit parameters, enabling better data analysis and decision-making
- Designed high-performance **REST APIs** using **Express.js** supporting onboarding and training workflows for **10K+** remote agents, streamlining operations and improving workforce scalability
- Composed a secure, stateless authentication layer using **JWT**, refresh tokens, and HTTP-only cookies, enhancing session integrity and hardening against XSS attacks
- Created strongly typed **React** modules using **TypeScript**, enhancing code reliability, maintainability, and developer productivity through static type safety
- Implemented scalable state management with **Redux** Toolkit (slices and thunks) to handle complex async workflows and predictable global state updates
- Managed file uploads and streaming using **Multer** and **Amazon S3** storage, ensuring efficient document handling

Education

Universität Passau, Germany

Master's in Computer Science

Apr 2024 – Mar 2026

(expected)

- **Coursework:** Advanced Software Architecture, Distributed Systems, Machine Learning Systems Design, Deep Learning (NLP)

National University of Computer and Emerging Sciences

Bachelor's in Computer Science

Aug 2018 – May 2023

- Dean's Honour List for securing SGPA over 3.9 (German grade: 1.1)
- **Coursework:** Data Structures & Algorithms, Neural Networks, Computer Vision, Natural Language Processing

Skills

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React 17+, Next.js 14+, Zustand, Redux, Tailwind CSS, MUI, Chart.js, Jest, React Testing Library

Backend: Node.js, Express.js, Django, Pandas, FastAPI, REST, GraphQL

Databases: PostgreSQL, MySQL, MongoDB, Qdrant

DevOps and Cloud: AWS, Kubernetes, Docker, GitHub Actions, Terraform
